

## $\alpha_s$ — PDG average 2023

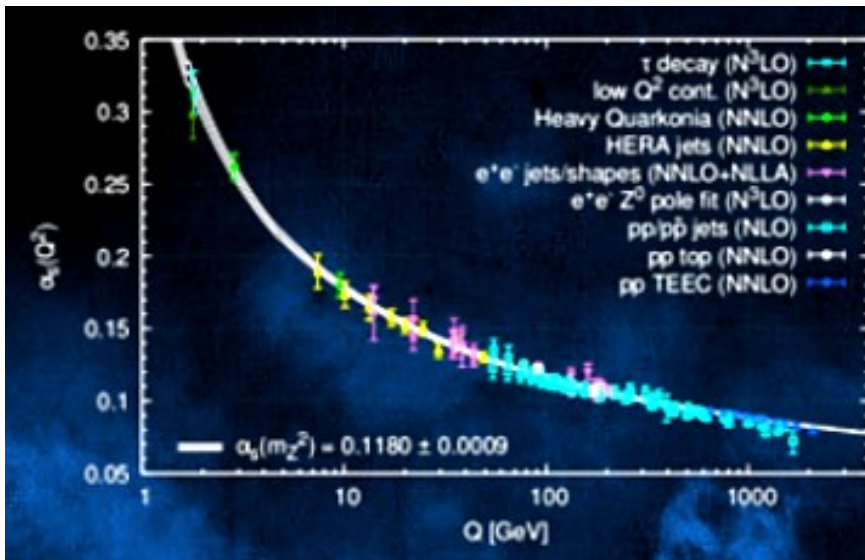

**J. Huston, K. Rabbertz, G. Zanderighi**  
(Michigan State U., KIT, MPI Munich)

# Outline

- PDG update timeline
- Criteria for inclusion in PDG  $\alpha_s$  average
- Averaging procedure
- Average updates
- Discussion

$$\mathcal{L} = \frac{1}{4g^2} G_{\mu\nu}^a G_{\mu\nu}^a + \sum_j \bar{q}_j (i\gamma^\mu D_\mu + m_j) q_j$$

where  $G_{\mu\nu}^a \equiv \partial_\mu A_\nu^a - \partial_\nu A_\mu^a + if_{bc}^a A_\mu^b A_\nu^c$

and  $D_\mu \equiv \partial_\mu + it^a A_\mu^a$

## Deadlines for review updates 2023/24

- ➔ **25<sup>th</sup> of May 23:** Agreement about scope of review changes
- ➔ **24<sup>th</sup> of August 23:** Review update delivered (by authors)
- ➔ **25<sup>th</sup> of August 23:** Referees identified (by PDG)
- ➔ **20<sup>th</sup> of September 23:** Referee reports sent to authors
- ➔ **11<sup>th</sup> of October 23:** All referee comments addressed (by authors) & sign-off (by PDG)
- ➔ **1<sup>st</sup> of December 23:** PDG online web update
- ➔ **13<sup>th</sup> of March 24:** Deadline for minor updates/corrections
- ➔ **27<sup>th</sup> of March 24:** Final sign-off (by PDG)
- ➔ **1<sup>st</sup> of June 24:** Final PDG online update
- ➔ **TBD 2024:** Journal publication

## Next iteration: 2025/26

## Deadlines for review updates 2023/24

- ➔ **11<sup>th</sup> of October 23:** All referee comments addressed (by authors) & sign-off (by PDG)
- ➔ **1<sup>st</sup> of December 23:** PDG online web update [QCD review on arXiv, 21.12.23](#)
- ➔ **13<sup>th</sup> of March 24:** Deadline for minor updates/corrections
- ➔ **27<sup>th</sup> of March 24:** Final sign-off (by PDG)
- ➔ **1<sup>st</sup> of June 24:** Final PDG online update
- ➔ **TBD 2024:** Journal publication

## Next iteration: 2025/26

- + Published in a peer-reviewed journal before the deadline of submitting the report**
- + Based on the most complete perturbative QCD predictions of at least NNLO accuracy**
- + Accompanied by reliable estimates of all experimental and theoretical uncertainties**

# PDG averages 2022

# PDG $\alpha_s$ averaging in 6 groups

$\tau$  hadronic decay widths & spectral functions

heavy quarkonia decays

global fits of proton structure &  $\alpha_s$

event shapes & jet rates in  $e^+e^-$

observables from hh collisions & DIS

electroweak fits

**FLAG 2019 estimate from lattice calculations**

# PDG $\alpha_s$ averaging in 6 groups

August 2021

One entry (red point) might be already an average, e.g. the first one BDP 2008-16.

Uncertainties might be combined from info in relevant publication(s), if total not explicitly given.

For each field determine unweighted average of central value and uncertainty  
→ black dotted lines & yellow area.

Non-lattice average derived from field averages by  $X^2$ -averaging method (if  $X^2/\text{ndof}$  too small, increase correlation until  $X^2/\text{ndof} \sim 1$ )

Derive final result from unweighted average of non-lattice average and FLAG estimate  
→ black dashed line & purple area

**FLAG 2019 estimate from lattice calculations**

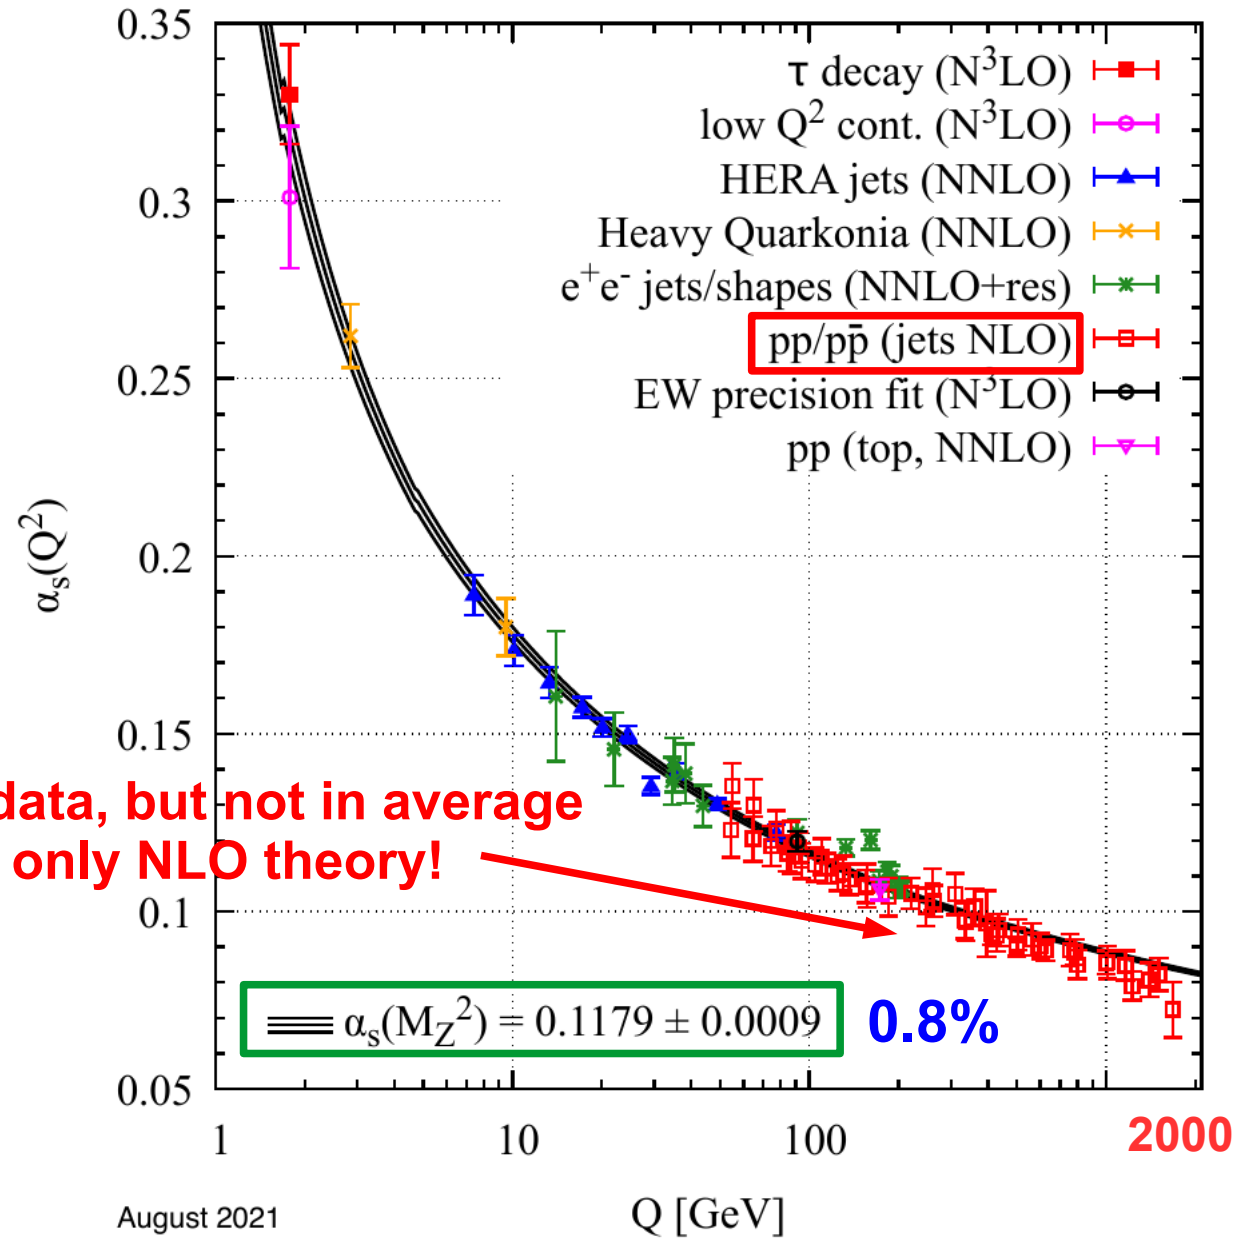

# PDG $\alpha_s$ average 2022

PDG, PTEP (2022) 083C01.

LHC data, but not in average since only NLO theory!

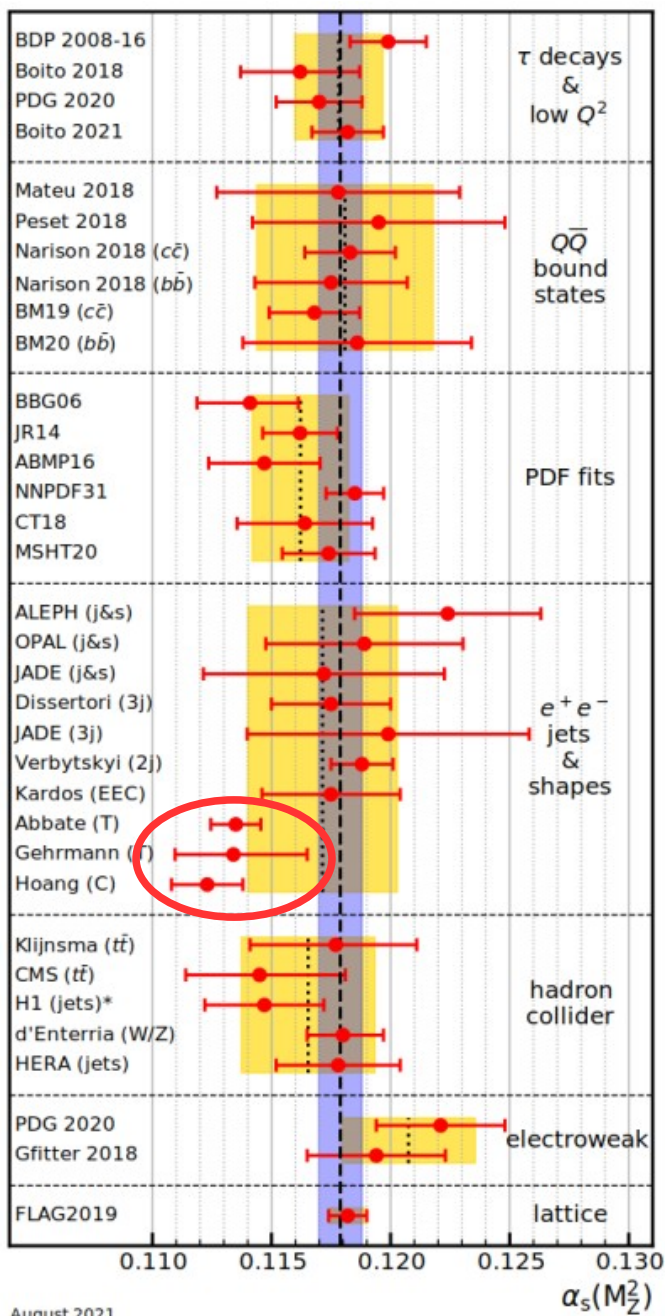

PDG'92: 2.4%

# PDG update 2023

# PDG $\alpha_s$ average 2022 $\rightarrow$ 2023

- remove CIPT  $\rightarrow$  red. uncertainty
- add result, update result

- add 1 result

- remove results with analytic hadronisation corrections

- add 2(3) results

- add 1 result

- update FLAG result

August 2021

August 2023

# Most prominent changes

## • $\tau$ decay widths

➔ two perturbative calculations used, both valid

➔ fixed-order perturbation theory (FOPT)

➔ contour-improved perturbation theory (CIPT)

➔ finite difference between the two,  $\alpha_s^{\text{CIPT}} > \alpha_s^{\text{FOPT}}$ , started long debate;  
→ included in uncertainty estimate

➔ now found that CIPT cannot be combined with standard OPE to estimate non-perturbative effects → removed for now

## • $e^+e^-$ event shapes (thrust, C parameter)

➔ analytical hadronisation corrections possible

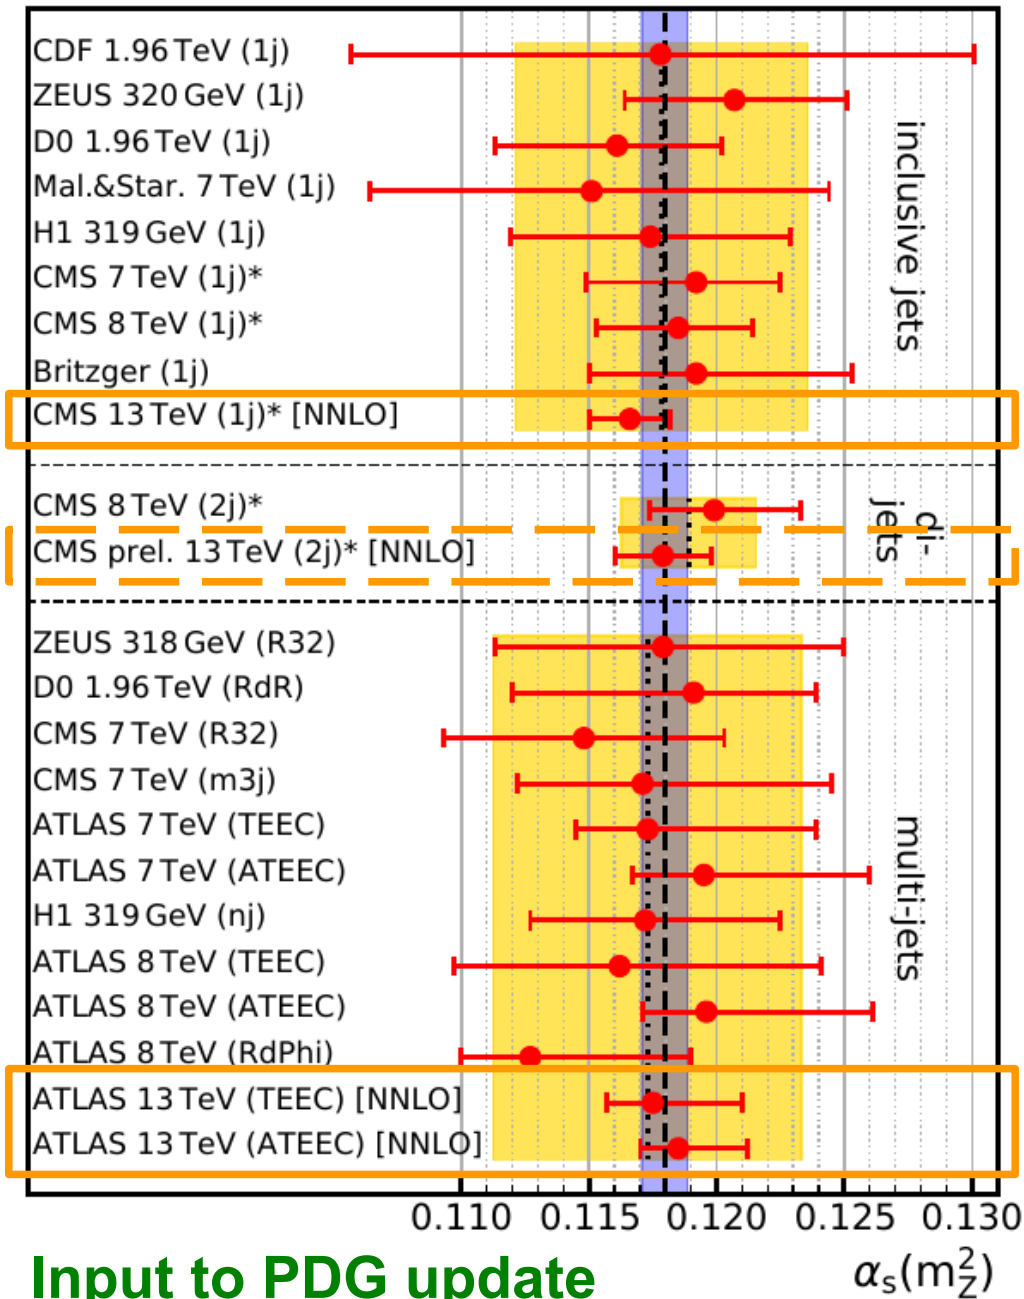

➔ but outliers with respect to MC estimated hadronisation corrections

➔ now found that use of analytical model based on 2-jet configuration needs modification for 3-jet limit where  $\alpha_s$  was extracted → removed for now

See QCD review at PDG2023 online for details and references.

# $\alpha_s(m^2_Z)$ from jet data

2023: new at NNLO!

Input to PDG update

# PDG 2023 $\alpha_s$ averages

averages per sub-field	unweighted	weighted	unweighted without subfield
$\tau$ decays & low $Q^2$	$0.1173 \pm 0.0017$	$0.1174 \pm 0.0009$	$0.1177 \pm 0.0013$
$Q\bar{Q}$ bound states	$0.1181 \pm 0.0037$	$0.1177 \pm 0.0011$	$0.1175 \pm 0.0011$
PDF fits	$0.1161 \pm 0.0022$	$0.1168 \pm 0.0014$	$0.1179 \pm 0.0011$
$e^+e^-$ jets & shapes	$0.1189 \pm 0.0037$	$0.1187 \pm 0.0017$	$0.1174 \pm 0.0011$
hadron colliders	$0.1168 \pm 0.0027$	$0.1169 \pm 0.0014$	$0.1177 \pm 0.0011$
electroweak	$0.1203 \pm 0.0028$	$0.1203 \pm 0.0016$	$0.1171 \pm 0.0011$
PDG 2023 (without lattice)	$0.1175 \pm 0.0010$	$0.1178 \pm 0.0005$	n/a

**Final average including lattice (FLAG2021):**

$$\alpha_s(m_Z^2) = 0.1180 \pm 0.0009$$

**rel. uncertainty: 0.76%**

# Inclusive jets: $\alpha_s$ & PDFs

Simultaneous fit of  $\alpha_s$  & PDFs possible combining HERA DIS & CMS jet data using xFitter Tool

**CMS result for  $\alpha_s(M_Z)$  at NNLO:**  $\alpha_s(m_Z^2) = 0.1166 \pm 0.0016(\text{fitall}) \pm 0.0004(\text{sc1})$

## Reduced uncertainties of gluon PDF

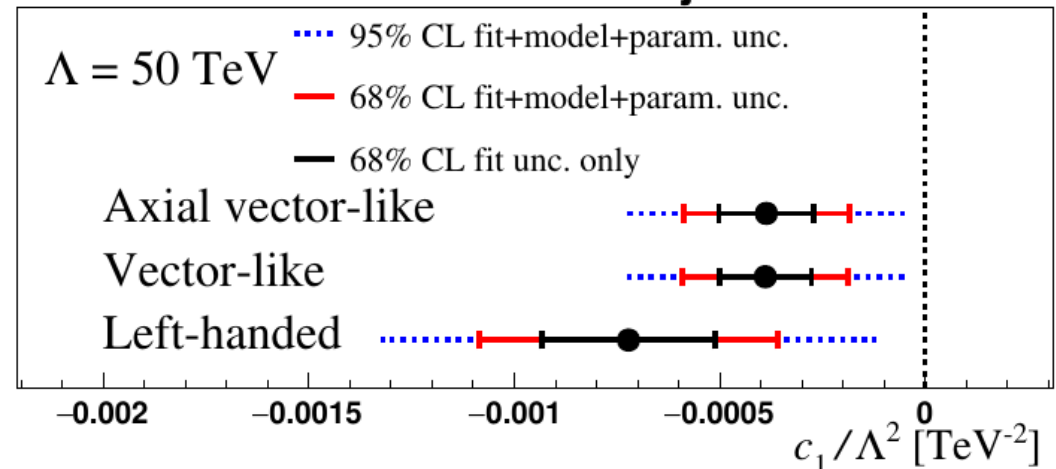

CMS, JHEP02 (2922) 142 & JHEP12 (2922) 035.

**Also NLO fit of  $\alpha_s$  & PDFs & CI**  
**Data compatible with SM  $\rightarrow$  exclusion limits**

$$\mathcal{L}_{\text{SMEFT}} = \mathcal{L}_{\text{SM}} + \frac{2\pi}{\Lambda^2} \sum_{n \in \{1,3,5\}} c_n O_n. \quad \text{EFT}$$

## CMS SMEFT NLO 13 TeV jets & $t\bar{t}$ + HERA

# Transverse energy-energy correlation

$$\frac{1}{\sigma} \frac{d\Sigma^{\text{asym}}}{d \cos \phi} = \frac{1}{\sigma} \frac{d\Sigma}{d \cos \phi} \Big|_{\phi} - \frac{1}{\sigma} \frac{d\Sigma}{d \cos \phi} \Big|_{\pi-\phi}$$

Asymmetry

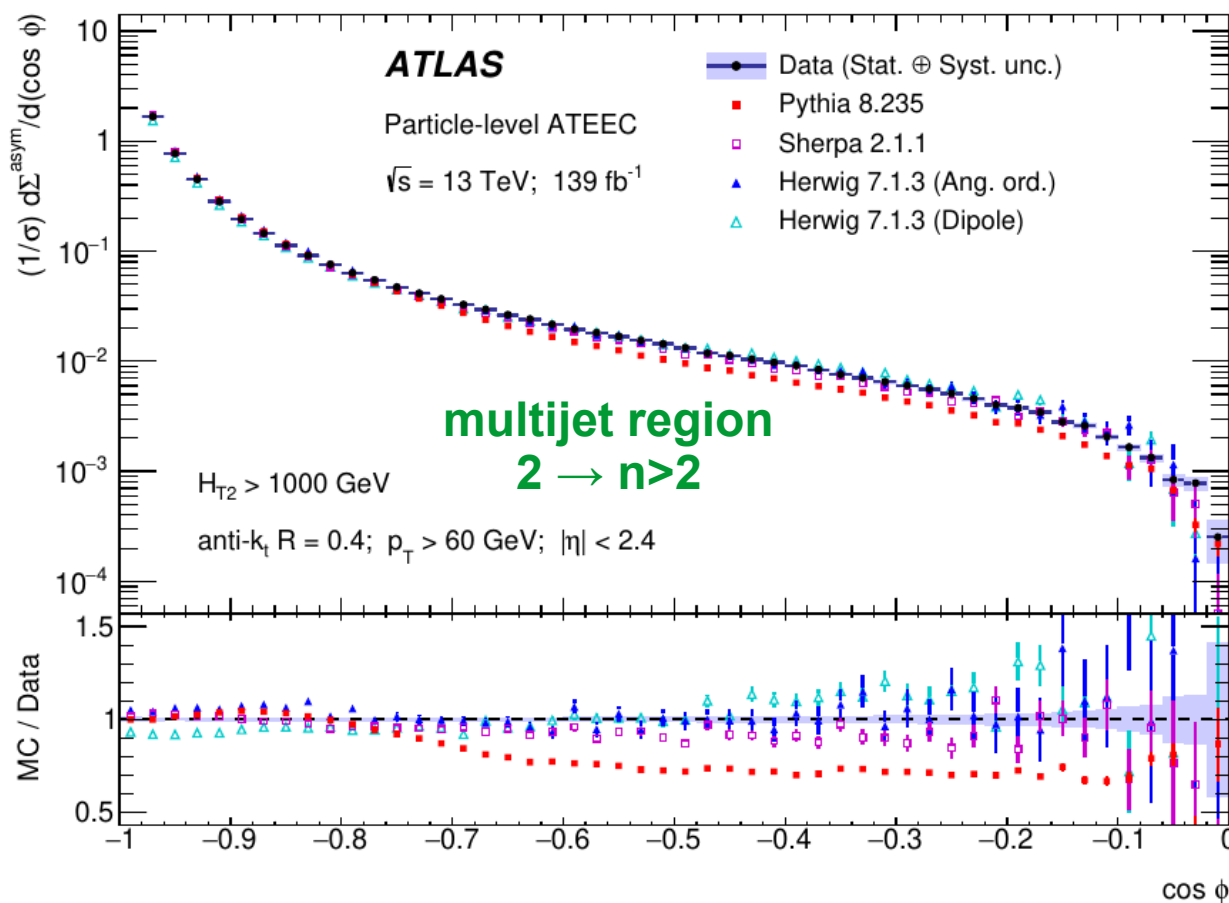

ATEEC  $\propto \alpha_s$

NNLO

$$\alpha_s(m_Z) = 0.1175 \pm 0.0006 \text{ (exp.) }^{+0.0034}_{-0.0017} \text{ (theo.)}$$

$$\alpha_s(m_Z) = 0.1185 \pm 0.0009 \text{ (exp.) }^{+0.0025}_{-0.0012} \text{ (theo.)}$$

Normalised

ATLAS, JHEP 07 (2023) 085.

## Two goals for $\alpha_s$ :

1. Measure the running of  $\alpha_s(Q)$  up to the highest scales possible  
→ looked after  $\alpha_s(Q)$ !
2. Measure  $\alpha_s(M_Z)$  as precisely as possible  
→ find phase space with small uncertainties:  
20 – 200 GeV, central rapidity

Better in:

- JEC uncertainty
- PDF uncertainty
- Evolution to  $M_Z$

Worse in: NP effects

Incredibly shrinking error

Uncomfortably growing error
